DP 200 DRUM PACKER

STANDARD & ATEX

OVERVIEW

The Moovmor DrumPak 200 is designed for compacting waste materials into steel or fibre drums.

Frequently used for low level hazardous waste destined for incineration, the user can achieve a maximum payload into each drum – around 3 to 4 black bags into a steel drum. These units are available with a fixed base and forklift slots or with a detachable steel pallet for removing the drums with a pallet truck. Where required DrumPakers can be fitted out to ATEX level. For more high risk material a HEPA filtration system can be incorporated.
